**BULL MOOSE™**  
**INDUSTRIES**

▶ For exceptional strength.

Once the parent company of Bull Moose Tube and Bull Moose Engineering, Bull Moose Industries is now the head of a rapidly growing family of technology-oriented companies.

We remain firmly committed to growing and investing in our core, legacy businesses. However, we are also in the process of building on our far-reaching heritage to transform ourselves into a diversified provider of products and services of exceptional strength.

To accomplish this vision, we are actively acquiring companies that manufacture highly engineered products, or provide services critical to such products.

Throughout our expansion, Bull Moose will combine the operational insight and long-term value creation of a strategic buyer with the M&A acumen and resources of a financial buyer...making us a very distinctive player in the acquisition arena.

# BULL MOOSE INDUSTRIES CURRENTLY ENCOMPASSES THREE MAIN DIVISIONS:

Our enterprise began as Bull Moose Tube in 1962, and today, this division remains an important cornerstone of the Bull Moose Industries organizations.

Our steadfast commitment to quality is driven by our unique manufacturing methods. Bull Moose forms tube directly from steel coil, eliminating a “mother tube” process.

This approach enables us to start with the highest-grade steel, form sharper corners, craft the straightest tube, and make the most consistent welds.

Reflecting our proficiency in complex products, Bull Moose Engineering supports customers with product-development assistance and extensive fabrication services.

Bull Moose Engineering expertly cuts, punches, bends, lasers, and welds tubular products to achieve its customers’ design vision.

With access to resources on three continents, we understand the pressures of time, cost and quality from a strong global perspective.

Our manufacturing, metallurgy and application expertise all combine in this division, which produces trailers for the heavy-haul trucking field.

Highly specialized designs (including bottom dumps, slide axles, detachable goosenecks, and extendable decks) help perform extreme tasks within such industries as construction, agriculture, and oil & gas. Whether towing earth-movers or transporting massive pipeline components, these brawny trailers embody the convergence of our steel products and our engineering expertise.
